Liquid Face Lift-Look 10 Years Younger in 1 Hour at Ethos Spa in Summit, NJ

Despite tough economic times, many Americans are turning to cosmetic procedures to look younger. Newer non-invasive or minimally invasive procedures are replacing surgical options for rejuvenation. The liquid face lift is one such alternative.

March 17, 2010 -- PRLog -- The liquid face lift is ideal for someone who wants to look years younger without sacrificing risk, cost, and downtime associated with a surgical face lift. The procedure is considered a minimally invasive procedure and can be performed in under 1 hour with either no anesthesia or utilization of topical anesthetic cream and possibly a local block like that done by a dentist.

A combination of botulinum toxin, either Botox or Dysport, along with a dermal filler such as Juvederm, Restylane, or Radiesse is utilized to remove unwanted wrinkles as well as to fill in the deeper wrinkles and folds resulting in a younger look.

At Ethos Spa, Skin and Laser Center, located in Summit, NJ, the physicians are committed to rejuvenating your skin. Botox can be utilized for wrinkles causing frown lines, forehead lines, crow's feet, as well as to treat downturned corners of the mouth, a pebbly chin, and finally the vertical lines around the lips.

Botox injection take only a few minutes and clients only feel a slight pinch. The effects of Botox last anywhere from 3 to 5 months. The duration of effects increase with repeated use. Side effects are minimal and include temporary redness at injection sites as well as bruising. One of the more feared side effect is a droopy eyelid, double vision, and difficulties breathing and swallowing. While these potentially can occur with any injections, physicians at Ethos prevent this through their thorough understanding of facial anatomy as well as using a concentration solution of Botox. Other places which may use a dilute solution may risk the spread of the Botox to unintended areas.

A dermal filler is then used to fill in deeper wrinkles and folds such as the nasolabial folds (laugh lines), the mental (chin) crease, as well as to augment lips, cheeks, and improve the sagging jaw line. Fillers are used to replace the volume that is lost with aging and sun damage. Risks of dermal fillers are similar to Botox and include temporary redness and bruising.

Ethos Spa services clients primarily from northern NJ, but they frequently see clients from New York, Pennsylvania, as well as Delaware. Our physicians, all board certified including a plastic surgeon, are committed to make you look younger in a safe, tranquil environment.
