

Air PHONE No.1 - The ultra thin phone

You like touch screen phones with iPhone style; you have to see the latest Chinese phone from Shenzhen High-tech District. It's called the AirPhone No.1 and it has been built to make all other touch screen phones looked obsolete.

April 24, 2010 - [PRLog](#) -- You like touch screen phones with iPhone style; you have to see the latest Chinese phone from Shenzhen High-tech District. It's called the AirPhone No.1 and it has been built to make all other touch screen phones looked obsolete.

The recipe for the AirPhone No.1 is "simple", you take a i68+ phone style, you step on it until you reach 8,5 mm thickness (same as the Apple Touch) to give it an ultra slim design, you replace the plastic back cover by an all stainless steel one for a chromium look, you switch the old 3,2 inch touch screen by the latest 3.5 inch HVGA capacitive screen, the old 0,3 megapixel still camera by a 2.0 megapixel with a maximum output of 1600*1200 pixel, the everlasting MTK6225 CPU by the Mtk6235b and as you still have more space left in the phone, you add WIFI and EDGE support, a built in memory of 2Gb, an 2,5 mm universal audio jack, dual-loudspeakers, the FLV (Youtube and Dailymotion) and a RM (Real Media) video format supported then, add few games.

The rest of the spec is what you usually find in Sciphone i68+ or CECT i9 phones: Quad band, GPRS, Bluetooth, radio, a support for an external memory card and a java virtual machine to install new applications.

To keep the AirPhone No.1 thin, the manufacturer had to make the battery part of the phone (Built-in) and it's only a single SIM.

Price should be just under USD 150.

Features as found on the Internet :

Information Network: GSM 850/900/1800/1900 Mhz

Dual SIM: No

CPU: MTK MT6235b

Operating system:

GPS: no

Connectivity: GPRS / EDGE 2,5G / Bluetooth V2.0 Bluetooth + EDR + A2DP / USB

Messaging: SMS, EMS, MMS with Handwritten input
