

## New User-Friendly Website to Include Solar Thermal, Hydronics and Tankless Water Heaters

*Low Energy Systems, a Denver based wholesale distributor and hot water experts, launches a new website to include educational tools, product guides and detailed specifications about WaiWela tankless water heaters, solar thermal and hydronic products.*

**July 27, 2012** - [PRLog](#) -- Denver, July, 2012 – Low Energy Systems proudly announces the launch of their new website at <http://www.tanklesswaterheaters.com>. Traditionally a site devoted to tankless water heaters, the new website incorporates products encompassing all things related to heating water, including solar thermal and hydronics. The website is a critical component in educating consumers and contractors on energy efficient water heating techniques and the energy and water savings that tankless water heaters, solar thermal and hydronics can provide.

Our website is a great tool in educating consumers about the benefits of alternative, energy efficient means of heating water. We have been successful in educating people about tankless water heaters and now, we'd like consumers to understand the energy and cost savings of solar thermal and hydronics. When most people think of 'solar' they think of solar photovoltaic. However, we'd like to change that by letting consumers know about the other solar – solar thermal and hydronic heating.

The website will continue to grow daily by providing new products and educational tools about WaiWela tankless water heaters, solar thermal and hydronics products including Caleffi, Grundfos, Watts Radiant, Viessmann, SunEarth and many more. It currently features tools and articles, sizing guides and detailed product specifications about gas and electric tankless water heaters, mini tanks, solar thermal and hydronics.

### About Low Energy Systems

Low Energy Systems, Inc. has a broad selection of gas indoor, outdoor and direct vent, ENERGY STAR qualified gas tankless and electric tankless water heaters for residential and commercial applications, as well as under the sink water heaters and solar and hydronics products.
