

SCALP ESTHETICA

SMP Hair Density Treatments for Men and Women with Thinning Hair or Bald Spots

Scalp Esthetica is the Best SMP Clinic for Men and Women looking to add hair density and fullness to thinning hair or bald spots. SMP Hair Density Treatments increases your self esteem, self confidence and body image.

TORONTO - Oct. 15, 2015 - [PRLog](#) -- Scalp Micropigmentation (SMP) is a non-surgical procedure, which is carried out on a scalp to take care of **Thinning Hair**, balding, hair loss and scars. This procedure is only carried out by professionals who have been trained to carry out **SMP** and have the required experience. **Thinning Hair** is a problem that affects both men and women of all ages all over the globe. It is a procedure that has become quite popular these days, and Scalp Esthetica Company is the Best SMP Clinic, that is well known for offering professional Thinning Hair treatment (SMP Hair Density) all over Toronto, Ontario. **Scalp Micropigmentation** is a method that is modern, and uses needles to apply medical grade color pigment on the scalp. The color used in the Thinning Hair treatment is natural and does not fade like the color used in normal tattoo. The pigments that we use for carrying out SMP are pharmaceutical quality, and they conform to the EU Cosmetics Directive standards that were signed in the year 2008.

The pigments used in **Thinning Hair** treatments are of the highest quality, have minerals and have been dermatologically and microbiologically tested. The pigments are organic, do not contain any heavy metals or aromatic amines, have no type of synthetic preservatives, and are also hypoallergenic. Even though you may look at **SMP** procedure as normal tattoo, but the fact is that colors used for the normal tattoo do not undergo the same rigorous testing and regulations such as the **Thinning Hair** treatment pigments. The pigment or the color used for normal tattoo changes due to the migration and color type, and also the tissue level where the tattoo has been injected. **Thinning Hair** procedure is different, and the pigment is implanted on the top layer of the epidermis, and the color does not change at all. Once the SMP procedure has been carried out on your scalp, it can last between one and three years, and it is a good idea for you to go back for a retouch after three years, for the treatment to remain looking good.

At Scalp Esthetica, we are not in a position to determine the exact time that the Thinning Hair procedure

lasts, since the longevity depends mostly on the biology of the patient, lifestyle and several factors that may affect the procedure. Do not shy away from **Scalp Micropigmentation** treatment since you will not feel any pain at all. This is because the pigments are only fixed on the top layer of the epidermis. The Thinning Hair treatment is supposed to take no more than four hours. This is because the scalp can become irritated after this period, and the patient can experience some pain. The good news is that SMP is now being carried out in Toronto, Canada. Visit us today and get a quote that will not make you break the bank!
