WCAGScan Launches Automated WCAG/ADA Accessibility Scanner and Desktop Companion App WCAGScanner

Crawls websites and linked PDF, Word, and PowerPoint files against WCAG 2.0, 2.1, and 2.2, delivering scored reports with plain-English, before-and-after code fixes.

NEW YORK - July 25, 2026 - *PRLog* -- WCAGScan, a web accessibility scanning service built by a software team with more than 40 years of experience developing mission-critical systems for the telecom and enterprise industries, has launched alongside its companion Windows desktop application, WCAGScanner. The two products give organizations of any size an automated way to find, understand, and fix web accessibility issues before they become compliance failures or the basis of a lawsuit.

Both products check websites and linked documents against the Web Content Accessibility Guidelines (WCAG) versions 2.0, 2.1, and 2.2, across Level A, AA, and AAA compliance tiers, and organize findings using the WCAG POUR framework — Perceivable, Operable, Understandable, and Robust.

WCAGScan: Accessibility Scanning as a Service

WCAGScan is a browser-based scanning service available now at https://wcagscan.net. Users submit a starting URL and a verified email address, and WCAGScan's crawler traverses the site — following internal links, canonicalizing and de-duplicating URLs, and applying configurable depth and page limits — to examine every HTML page it can reach, along with any linked PDF, Word, and PowerPoint files.

Results are delivered by email as an interactive report that includes an overall accessibility score and letter grade, a breakdown of issues by severity, and concrete before-and-after code fixes for each problem found — from missing image alt text and insufficient color contrast to unlabeled form inputs.

WCAGScan is offered on a per-report basis: Starter at $49 per scan for up to 25 pages, Growth at $149 per scan for up to 250 pages, and custom Enterprise pricing for unlimited pages and documents. A free scan of up to five pages is available for organizations that want to evaluate the service before purchasing a full report.

WCAGScanner: A Desktop Application for Frequent, In-Depth Scanning

For compliance teams and agencies that scan often, WCAGScan also offers WCAGScanner, a Windows desktop application built on the same WCAG 2.0/2.1/2.2 engine. WCAGScanner adds deep-crawl controls, drag-and-drop scanning of local documents, and an interactive Preview tab that shows live pages side by side with proposed fixes. The application generates POUR-formatted reports designed for compliance officers and auditors.

Because WCAGScanner runs entirely on the user's own machine, it can scan sites that require authentication in the user's browser session as well as local files, with no per-report fees and no page limits. WCAGScanner is available now as a lifetime license for $1,049.00, delivered as a signed installer with a license key emailed immediately after purchase.

Availability

WCAGScan and WCAGScanner are available immediately.

About WCAGScan

WCAGScan is built on more than 40 years of experience developing mission-critical software for the telecom and enterprise industries, extending that engineering background to web accessibility so organizations can find and remediate barriers under WCAG and ADA guidelines.
